ABSTRACTED-PUB-NO: WO 200066659A

BASIC-ABSTRACT:

NOVELTY - A polymer additive comprises an aliphatic, aliphatic-cycloaliphatic or cycloaliphatic compound containing at least two hydroxy groups, uniformly dispersed in a polyester-compatible organic liquid carrier. The additive is added to thermoplastic molding compositions comprising polyethylene terephthalate (PET), or its copolyester, to reduce the amount of acetaldehyde formed during polymer processing.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for:

- (1) A thermoplastic PET molding composition containing the hydroxy compound.
- (2) An injection molding process using the composition for the production of molded articles.
- (3) Molded articles made by the process.

USE - The PET composition may be used to form injection molded articles such as preforms (claimed) which may be used in a subsequent blow molding step to form bottles (claimed).

ADVANTAGE - Residual aldehyde levels in the polyester material are reduced without discoloration of the material during injection molding.
